

Ride Precision. Ride Japan. Ride KYB.

KYB is a leading Japanese hydraulic manufacturer renowned for its high-performance suspension systems in both the automotive and motorcycle industries. As a trusted OE supplier to major global brands and with over 70 years of expertise in motorcycle suspension technology, **KYB** is now bringing its world-class innovation to the E-MTB market.

KYB's E-MTB suspension is engineered to deliver exceptional control, stability and comfort in all conditions – no matter how harsh the environment.

▶ INVERTED CONFIGURATION

Delivering an ultra-sensitive yet sturdy performance, giving riders superior comfort, safety and control. By reducing impact and vibrations - especially at high speeds or on rough terrain - an inverted fork **minimises rider fatigue and helps to maintain a safe ride.**

▶ MOTORCYCLE-BASED SUSPENSION TECHNOLOGY

Leveraging KYB's proven motorcycle suspension expertise, the suspension features a **motorcycle-style piston slide structure and a proprietary valve system** for smooth and speed-sensitive damping performance.

▶ CUSTOMISABLE

With **replaceable coil springs and air assist**, the suspension offers precise **rebound and compression adjustment**, and is **compatible with both 27.5" and 29" wheels** for maximum versatility.

Technical Specifications

Area of Application	E-MTB, Trail, Enduro
Fork Type	Inverted
Wheel Size	27.5" and 29"
Fork Travel	160mm
Axle	20 x 110mm
Steerer Tube	1.5" Tapered
Steerer Tube Length	220mm
Installation Height (Crown to Axle)	579mm
Fork Adjustability	Compression, Rebound
Spring	Coil with adjustable air assist
Type of Brake	Brake disc
Disc Brake Mount	PM (7") 160mm, post mount
Outer Tube	41mm tapered 7000 series aluminium
Inner Tube	32mm 7000 series aluminium
Weight	2850g
